

## California Pomona Ordnance Depot

---

### ***Facility and Location***

Pomona Ordnance Depot was disposed of in 1946. The was part of the California-Arizona Maneuver Area (C-AMA) Ordnance Supply and Service Base. DoD constructed over 300 buildings and the site was connected to several railroad spurs. Flares, pyrotechnics, and other munitions were stored or transported through this facility.

### ***Media Sampled and Findings***

In the summer of 2003, the California Regional Water Quality Control Boards requested information from DoD regarding perchlorate in drinking water. DoD worked with California regulators to establish an interagency working group and a methodology for prioritizing sites for sampling to determine the extent of the problem potentially attributable to DoD. The California Perchlorate Sampling Prioritization Protocol allows California to assist DoD in prioritizing the investigation of suspected sites and to focus resources on the sites that may have the greatest impact to the public. Pomona Ordnance Depot was identified as a site for additional consideration and possible sampling per the California Perchlorate Site Prioritization Protocol. Records research found no storage or release of perchlorate at this Formerly Used Defense Site (FUDS).

### ***Appropriate Actions***

The state has agreed that no additional work is necessary.
